Risk Consultancy Services

The Problem Hypothesis

Business leaders are often drawn away from their core business objectives by the need to deal with detracting internal or external issues. This often results in reduced efficiency, loss of momentum and ultimately a reduction in the revenue opportunity.

Our Methodology

Our solutions methodology is developed in line with your strategic needs and organisational structure. We follow international best practice standards and can develop solutions that are compliant with identified industry standards or benchmarked against international best practice.

The Solution Proposition

At **QSi** we reduce that burden on business leaders by managing the risk environment. We monitor, assess, analyse and report risk information to our clients so that they can make fully informed executive decisions. We propose fully integrated mitigation strategies and implement solutions across all levels of the organisation, allowing business leaders to focus on their core business.

Our process involves all or some of the following:

Client engagement – Understanding your organisation, how it works and your strategic objectives

Risk & threat analysis – Identifying and quantifying risks & threats to the business

Data & gap analysis – identifying the organisations capability is in relation to needs and compliance

Mitigation planning – development of a strategy in line with organisational risk appetite

Policy, plans & procedures – Development of corporate documentation to drive the strategy

Implementation – We implement strategies across the entire organisation in line with the strategy

Training & development – Ensuring all levels of the organisation are trained to fulfil their roles

Review & update – Continually reviewing the strategy as the risk environment develops

Independent audits – Carrying out spot checks on individual locations to ensure standards are met
